

# When using artificial intelligence in public administration

## We take into account:

- the effects of AI technologies on citizens, society and the environment
- the ethical perspectives at different stages of design, development and use.

## We recognise:

- that AI can be used on citizens, society and nature
- that the authorities are responsible for the effects that using AI technologies have on their tasks and decisions.

## We comply with:

- the principles, acts and statutes of public-service ethical standards
- good governance and open government.

## We promote:

- active citizenship and a society built on trust
- justice, equality and human rights
- the wellbeing of people, society and the ecosystem.

## We secure:

- citizens' rights to safe and open government
- the realisation of the rights of citizens
- trust in the authorities and the positive development of democracy.

## We avoid:

- unnecessary and unjustified harm to people, society or the environment.
